WO 2005/084337 A2

(54) Title: A SELF-SETTING HIGH PRESSURE FITTING

(57) **Abstract:** A coupling element comprising a male sealing element is disclosed herein. The male sealing element comprises a first end, second end, and a longitudinal axis extending between the first and second end. The coupling element is housed within a nut. In one aspect, the male sealing element has a generally cylindrical shape. Also, the male sealing element defines a fluid passageway therethrough for the transmission of fluid. The male sealing element is secured to a ferrule which is located within a cavity of the nut. The first end of the male sealing element defines a conical sealing surface. In one aspect, the male conical sealing surface mates with a female sealing element which has a receptacle that is defined by a nearly complementary conical geometry. In this aspect, the male conical sealing surface has a mismatched angle when compared to the complementary conical female sealing element. The coupling element also has a biasing element disposed between a retaining ring and the ferrule located within the nut cavity. This biasing element facilitates a fluid-tight, metal to metal (or metal to plastic, or plastic to plastic) seal between the male sealing element and female sealing element.
